We are pleased to have this opportunity to offer you our quotation for supplying the RS-11A/B Power system components in accordance with a request forwarded by your [redacted] short time ago.

25X1

It is assumed that these power units are to operate the RS-11A and RS-11B equipment which is currently being developed by our company. We have planned the units so that they will provide excellent operation of the RS-11A/B.

The RP-11, AC power supply has been planned to fit easily within the carrying case designed to hold the RS-11A/B equipment. Our present feeling is that through the use of hypersil core material and light-weight case, the weight and size can be kept about the same as the battery BA-1264/U, with its adapter unit.

The hand-cranked generator will be made of light weight material and provision will be made to fold it into as small a package as possible. Consideration will be given to the possibility of making this a foot-powered unit to save space and make it possible for the operator to "pedal" this unit while operating his equipment.

The gasoline engine driven generator may well be lighter in weight than the hand-cranked unit. We are planning to use a unit of revolutionary design made by the Special Purpose Engine Co. of New York. This unit has been designed for just the power range we require for this application and has many features which insure long life and high dependability.

A brief technical description of each of these units is attached.

Our quotations are as follows:

ITEM I:

A. 10 each AC Power Supply, RP-11
 Design Engineering \$6,000.00
 Materials and Construction Labor . . . 3,450.00
 Total for 10 units \$9,450.00
 Additional units \$345.00 each

B. 10 each Hand Cranked Generators, RH-11
 Design Engineering \$6,000.00
 Materials and Labor. 6,615.00
 Total for 10 units \$12,615.00
 Additional Units \$661.50 each

C. 10 each Gasoline Engine Generators
 Design Engineering \$ 6,000.00
 Materials and Labor. 12,075.00
 Total for 10 units \$18,075.00
 Additional units \$1,207.50 each

ITEM II:

Two sets manufacturing drawings, each equipment
 type, one set to be reproducibles -
 \$1,200.00

ITEM III:

Two sets Bill of Material, each equipment type,
 one set to be reproducibles -
 \$600.00

ITEM IV:

Fifteen each operation and maintenance manuals, each
 equipment type. (To be ozalid-type printing).

Included in Item I above.

We propose that the appropriate time to begin work on these new equipments would be immediately after our SS-11A prototype units have been submitted and received approval of your engineers. After beginning work on these power supply units, we feel that 6 to 7 months will be required for completion.

We are pleased to have this opportunity to be of service to you.

Very truly yours
